Dr. Anna Sepiolo is a highly experienced Obstetrician and Gynaecologist who has worked at some of the Europe’s most prestigious hospitals and clinics, including King’s College Hospital in London.

More recently, in response to the growing demand from patients for longevity and healthy ageing, she has focused her practice on the early detection, prevention and treatment of age related conditions. Her goals are to slow down the ageing process, keep the body functioning at its optimum level and to enhance health and well-being.

Dr. Sepiolo fluently speaks English and Polish.

---

**WHAT IS VAGINAL ATROPHY?**

Vaginal atrophy is thinning of the vaginal wall caused by decreasing estrogen levels.

**TREATMENTS**

Most of these conditions can be solved with the help of surgery, sling procedures, and non-surgical laser procedures.

**WHAT IS URINARY INCONTINENCE?**

Urinary incontinence is involuntary loss of urine during coughing, laughing or physical activity like running or climbing the stairs.

**WHAT CAUSES URINARY INCONTINENCE?**

This condition is most commonly caused by weakening of urethral closure mechanism and reduction of muscular tone in the pelvic floor organs.

**WHAT IS VAGINAL RELAXATION SYNDROME?**

Vaginal relaxation syndrome is actually an increase in diameter of vaginal wall (loss of friction and sexual satisfaction for both woman and her partner).

**WHAT CAUSES VAGINAL RELAXATION SYNDROME?**

Overstretching of the vaginal wall during delivery and effects of natural aging.

**WHO CAN SUFFER FROM VAGINAL RELAXATION SYNDROME?**

Any lady can suffer from this syndrome either after giving birth or due to hormonal deficiency.

**LASER: MEDICAL POWER OF LIGHT**

Supported with the latest medical equipment, Dr. Anna Sepiolo offers nonsurgical, non-invasive treatment for urinary incontinence, vaginal atrophy and vaginal relaxation syndrome.

The laser treatment is photothermal treatment of vaginal canal that restores vaginal mucosa. This treatment’s advantages compared to other methods of treatment are: high success rate, safe, quick and non-invasive procedure with no incision, no sutures and no bleeding.
